

Zhou Xiangcheng --- AI Application Development Engineer

Basic Information

Zhou Xiangcheng | Male | 10+ years development experience | Bachelor's Degree (Huanghuai University, Electronic Information Engineering)
Phone: 15201120927 | Email: developer_zxc@126.com
Github/Portfolio: <https://pgzxc.github.io/resume/>

Job Objective

Job Type: Full-time | Expected Position: AI Application Development Engineer
Work Location: Beijing | Expected Salary: 15-30K (negotiable)

Work Experience

2013.06 --- 2014.06 Quanta Shanghai Computer Manufacturing City, Test Assistant Engineer
2015.04 --- 2015.10 Leyikao (Beijing) Education Technology Co., Ltd., Android Development Engineer
2015.10 --- 2016.07 Timekeeper Internet Technology (Beijing) Co., Ltd., Android Development Engineer
2016.07 --- 2018.06 Tibet Yuanyu (Beijing) Network Technology Co., Ltd., Android Development Engineer
2018.07 --- 2022.04 Zhongke Aerospace (Beijing) Technology Co., Ltd., Full-stack Development Engineer
2022.06 --- 2024.12 Best Imagination Technology Co., Ltd., Full-stack Development Engineer
2024.12 --- Present Professional Development & Technical Exploration | HarmonyOS Ecosystem Deep Practice | AI-assisted Development

Tech Stack

1. Mobile (Proficient): HarmonyOS, Android, iOS
2. Cross-platform (Proficient): Flutter, ReactNative, KMP, Tora, etc.
3. Mini-program Development (Familiar): WeChat Mini-program, uni-app
4. Web Frontend (Familiar): Frameworks (react/vue), UI Libraries (element/Ant Design, etc.)
5. Backend Development (Beginner): Java (company projects: mybatis + microservices + distributed)
6. Desktop Development (Beginner): WinForm (company projects: elderly care project)
7. AI Development: ChatGPT-like applications (online and local) and lifestyle applications
8. Development Method: Traditional programming + AI-assisted development

Professional Skills

1. Familiar with large model application development, experienced in building AI chat systems based on Gemini / Qwen / LLaMA
2. Mastered OpenAI API protocol, capable of implementing unified integration of local models (Ollama) and clients

3. Familiar with SSE streaming communication mechanism, implementing incremental rendering for AI conversations
4. Skilled in using HarmonyOS ArkTS for native application development, building responsive UIs
5. Skilled in using Flutter for cross-platform AI application development
6. Capable of network layer encapsulation, supporting unified handling of regular and streaming requests
7. Familiar with component-based and modular design, improving project maintainability and scalability
8. Experienced in private deployment of local large models and LAN communication debugging

Project Experience

Project Owner: Personal Project (Open Source)

Project Name: FlutterGeminiAI

Project URL: <https://github.com/PGzxc/FlutterGeminiAI>

Platform Support: Android + iOS

Development Tools: IDEA 2024.1.3 + Flutter (3.22.2)

Project Description: Flutter Gemini AI is a multimodal AI conversation application built on Google Gemini-1.5-Flash model, supporting pure text and mixed text-image input. Users can naturally interact with AI through text or images, with a chat window-style interface design, messages displayed on left and right sides, simple and intuitive interface, enhancing interaction experience.

Functional Modules: Conversation Module

Technical Highlights:

1. API Development: API support based on Google Generative AI
2. Model Support: GenerativeModel provides model configuration
3. UI Construction: Responsive interface development based on Flex layout
4. Network Requests: Using Google Generative AI SDK for network requests and multimodal requests
5. Asynchronous Processing: Using async/await asynchronous programming to handle time-consuming operations like network requests
6. Custom Components: Custom bottom input module (input box + image selection + message sending)
7. Image Processing: Using image_picker package to implement image selection functionality

Project Owner: Personal Project (Private)

Project Name: ChatLocalHM

Project URL: <https://github.com/PGzxc/ChatLocalHM>

Platform Support: HarmonyOS

Development Tools: DevEco Studio 6.0.1 + Github

Project Description: ChatLocalHM is a local large model AI chat application developed based on HarmonyOS NEXT (ArkTS). The project accesses locally deployed Ollama large model services (qwen, llama3, etc.) through LAN, and combines New-API (OpenAI protocol) to implement unified interface calls, supporting streaming conversations, multi-model switching, and low-latency response, achieving ChatGPT-like native interaction experience on HarmonyOS.

Functional Modules: AI Conversation Module, Model Selection, Chat UI, Network Communication

Technical Highlights:

1. API Development: Converting ollama service to OpenAI interface through new-api
2. Model Switching: Getting model list based on /v1/models and switching between different large models
3. UI Construction: Responsive interface development based on Flex layout
4. Network Requests: Extracting model and streaming chat network interfaces based on Http
5. State Management: Implementing data-UI binding and real-time updates based on state management mechanism
6. Asynchronous Processing: Using async/await to handle asynchronous operations like network requests
7. Custom Components: Using @Component decorator to develop reusable components
8. Data Management: Using LazyDataSource to implement lazy loading of chat messages
