

Zhou Xiangcheng --- Android Development Engineer

Basic Information

Zhou Xiangcheng | Male | 10+ years of development experience | Bachelor's degree (Huanghuai University, Electronic Information Engineering)

Phone: 15201120927 Email: developer_zxc@126.com

Github/Portfolio: <https://pgzxc.github.io/resume/>

Job Intent

Employment Type: Full-time Desired Position: Android Development Engineer (Architect)

Work Location: Beijing Desired Salary: 18-30K (negotiable)

##Work Experience

2013.06 --- 2014.06 Quanta Shanghai Computer Manufacturing City Test Assistant Engineer

2015.04 --- 2015.10 Le Yi Kao (Beijing) Education Technology Co., Ltd. Android Development Engineer

2015.10 --- 2016.07 Time Internet Technology (Beijing) Co., Ltd. Android Development Engineer

2016.07 --- 2018.06 Tibet Yuanyu (Beijing) Network Technology Co., Ltd. Android Development Engineer

2018.07 --- 2022.04 Zhongke Hangtian (Beijing) Technology Co., Ltd. Full-stack Development Engineer

2022.06 --- 2024.12 Bess Changxiang Technology Co., Ltd. Full-stack Development Engineer

2024.12 --- Present Career Development and Technical Exploration | In-depth Practice of Hongmeng Ecosystem | AI-assisted Development

Technology Stack

1. Native Mobile (Mastered): Hongmeng, Android, iOS
2. Cross-platform (Mastered): Flutter, ReactNative, KMP, Tora, etc.
3. Mini Program Development (Familiar): WeChat Mini Program, uni-app
4. Web Front-end (Familiar): Frameworks (react/vue), UI libraries (element/Ant Design, etc.)
5. Backend Development (Beginner): Java (Company projects: mybatis + microservices + distributed)
6. Desktop Development (Beginner): WinForm (Company project: Elderly care project)
7. Development Methods: Traditional Programming + AI-assisted Development

Professional Skills

1. Familiar with project development modes: Traditional (XML+Java/Kotlin) and Declarative UI (ComposeUI)
2. Led high-complexity project development for live streaming/short video/IM, with audio-visual experience
3. Familiar with multithreading and asynchronous communication mechanisms: Handler, AsyncTask, Coroutine, thread pools, etc.
4. Familiar with core frameworks and principles: Retrofit/OkHttp, RxJava, Room, EventBus, MMKV, etc.
5. Familiar with integration and debugging of mainstream commercial SDKs: Login, SMS

verification, IM, video/live streaming, push notifications, payment, maps, etc.

6. Understood Android core mechanisms: Message mechanism, event distribution mechanism, View drawing process

7. Familiar with performance optimization and analysis: Startup optimization, lag detection, memory optimization, network optimization, over-drawing optimization, etc.

8. Familiar with compatibility and adaptation: Device adaptation (mobile phone/tablet/foldable screen) and version adaptation (Android 6.0+)

Project Experience

Project Attribution: Stream Media + Bess Changxiang

Project Name: Android Project --- La Liga+ (Football League)

Software Support: Android 6.0+

Development Tool: Android Studio+GitLab

Project Description: La Liga+

is a professional football league live streaming platform jointly developed by Bess Changxiang Technology and Stream Media, providing high-quality match live streaming and interactive experience for domestic football fans. The project covers match schedule booking, live viewing, replay review, chat room interaction, screen projection playback, team data, VIP Membership system and other functions, supporting horizontal and vertical screen switching and message push, meeting users' "watching football + communication + Data" one-stop experience needs.

Function Modules: Home, Schedule, Data, Live, Chat Room, My, etc.

Technical Highlights:

1. Based on componentized function splitting, divide the project into basic library, component layer and business layer\
2. Based on the basic library XUI to quickly integrate project UI development\
3. Based on the basic library AndroidPay to integrate Alipay and WeChat Pay\
4. Based on the basic library Alibaba Cloud Video SDK to play short video lists, match live streaming and replays
5. Based on XPopup to build various pop-up windows in the app
6. Based on OkHttp+Retrofit to build network access framework.
7. Based on Jiguang SDK to realize message push and live chat room chat

Project Attribution: Hitachi China

Project Name: Android Project --- Brain Training

Software Support: Android 5.0+

Development Tool: Android Studio3.1+SVN

Project Description: Brain Training is a localized application of Hitachi China's elderly care project. Through Bluetooth connection to brain-computer device XB-01

Real-time collection of cerebral blood flow data, combined with interactive game training to improve the cognitive and reaction abilities of the elderly. The system dynamically renders interface colors based on brain activity, and enhances immersive experience with voice feedback. After training, brain activity indicators and charts are generated to facilitate users to continuously track and evaluate cognitive status.

Function Modules: Device detection pairing, login, device connection, game selection, game, game results, ranking, etc.

Technical Highlights:

1. Built MVVM development framework based on ViewModel+DataBinding+Kodein\
2. Built network request and parsing framework based on Fuel+Kotlin Coroutine +fuel-jackson+MultiStateView\
3. Built data storage based on couchbaseLite+sharepreferences+kotpref\
4. Built Android's publish-subscribe events and event callbacks based on EventBus+interface callbacks
5. Custom View to implement custom input keyboard and face recognition area and ranking during face recognition
6. Interaction between Android native and WebView (js) games
7. Implemented face recognition and login functions based on OpenCV

Project Attribution: Personal Project

Project Name: SwiperAndroid (Private)

Project Address: <https://github.com/PGzxc/SwiperAndroid>

Software Support: Android

Development Tool: AS+Java(17.0.15)+Gradle(8.14.3)+Kotlin(2.0.21)+Trae

Project Description: Independently developed Android short video + album browsing application, using Jetpack

Compose to realize modern declarative

UI; Product form targets Douyin/Xiaohongshu short videos and graphic communities, providing smooth video/image sliding browsing, category viewing and full-screen immersive interactive experience.

Function Modules: Home, Album, Publish, Message, Me

Technical Highlights:

1. UI Framework: Use Jetpack Compose to build declarative UI\
2. State Management: Compose State + LaunchedEffect + ViewModel manage page state\
3. Network and Data: Retrofit + OkHttp + Gson + Coroutines implement asynchronous network requests\
4. Video Playback: ExoPlayer implements list auto-play, full-screen switching and playback control
5. Image Processing: Glide implements efficient caching and loading, optimizing long list scrolling performance
6. Gesture Interaction: Based on Compose gesture API to realize immersive interactive experience such as image zooming, swipe down to close, etc.
7. Screen Adaptation: Responsive layout + WindowInsets, adapting to irregular screens, system bars and various screen sizes
8. Build and Dependencies: Gradle DSL + Version Catalog + Compose BOM unified management of dependencies and versions

Project Attribution: Personal Project

Project Name: Android Project --- Live Live (Open Source)

Software Support: Android 6.0+

Project Address: <https://github.com/PGzxc/Live>

Development Tool: Android Studio + Github

Project Description: Live Live

is a personal open source project that imitates the interaction and function design of the "Inke" live streaming platform, covering core modules such as homepage, nearby, live streaming, following, and my. The project realizes core functions such as live room chat, barrage, gift effects, and supports pull-up and pull-down refresh and various content display layouts.

Function Modules: Home, Nearby, Live, Following, My, etc.

Technical Highlights:

1. Built development framework based on Bottom Bar+Fragmentation+DataBinding\
2. Implemented live room chat based on Huanxin chat room\
3. Implemented multiple layouts based on BaseRecyclerViewAdapterHelper\
4. Implemented pull-down refresh and pull-up loading based on SmartRefreshLayout
5. Implemented heart animation based on HeartLayout
6. Implemented chat barrage and gift effects based on ViewAnimator
