

# Zhou Xiangcheng --- iOS Development Engineer

---

## Basic Information

---

Zhou Xiangcheng | Male | 10+ years of development experience | Bachelor's degree (Huanghuai University, Electronic Information Engineering)

Phone: 15201120927 Email: [developer\\_zxc@126.com](mailto:developer_zxc@126.com)

Github/Portfolio: <https://pgzxc.github.io/resume/>

## Job Intent

---

Employment Type: Full-time Desired Position: iOS Development Engineer

Work Location: Beijing Desired Salary: 15-30K (negotiable)

## Work Experience

---

2013.06 --- 2014.06 Quanta Shanghai Computer Manufacturing City Test Assistant Engineer

2015.04 --- 2015.10 Le Yi Kao (Beijing) Education Technology Co., Ltd. Android Development Engineer

2015.10 --- 2016.07 Time Internet Technology (Beijing) Co., Ltd. Android Development Engineer

2016.07 --- 2018.06 Tibet Yuanyu (Beijing) Network Technology Co., Ltd. Android Development Engineer

2018.07 --- 2022.04 Zhongke Hangtian (Beijing) Technology Co., Ltd. Full-stack Development Engineer

2022.06 --- 2024.12 Bess Changxiang Technology Co., Ltd. Full-stack Development Engineer

2024.12 --- Present Career Development and Technical Exploration | In-depth Practice of Hongmeng Ecosystem | AI-assisted Development

## Technology Stack

---

- 1.Mobile (Mastered): Hongmeng, Android, iOS
- 2.Cross-platform (Mastered): Flutter, ReactNative, KMP, Tora, etc.
- 3.Mini Program Development (Familiar): WeChat Mini Program, uni-app
- 4.Web Front-end (Familiar): Frameworks (react/vue), UI libraries (element/Ant Design, etc.)
- 5.Backend Development (Beginner): Java (Company projects: mybatis + microservices + distributed)
- 6.Desktop Development (Beginner): WinForm (Company project: Elderly care project)
- 7.Development Methods (Familiar): Traditional Programming + AI-assisted Development

## Professional Skills

---

- 1.Familiar with project development modes: Traditional UIKit (xib/Storyboard+OC/Swift) and Declarative UI (SwiftUI)
- 2.Familiar with mainstream frameworks: Alamofire/AFNetworking, SDWebImage/Kingfisher, etc.
- 3.Familiar with common data storage: UserDefaults/MMKV, Core Data, Realm/SQLite
- 4.Understood system mechanisms: Event delivery mechanism, response chain, custom controls, KVC/KVO, CALayer/UIView, etc.
- 5.Understood underlying principles: Runtime, RunLoop, memory management (MCR/ARC), multithreading (GCD/NSOperation)

6. Familiar with common commercial SDKs: Push notifications, IM, payment, social sharing, video/live streaming, maps, etc.
7. Familiar with performance optimization: Memory leak detection, crash analysis, lag and performance monitoring, tools
8. Familiar with compatibility and adaptation: Size (iphone/ipad), screen resolution, system compatibility

## Project Experience

---

**Project Attribution:** Personal Project

**Project Name:** SwiperIOS (Private)

**Project Address:** <https://github.com/PGzxc/SwiperIOS>

**Software Support:** iOS

**Development Tool:** MacOS(15.7.3)+Xcode(26.2)+Swift(6.2.3)+Trae(Programming Assistant)

**Project Description:** This project is a high-fidelity Douyin imitation native iOS Short video and graphic community application, developed based on Swift + SwiftUI, combined with api.openapi.top  
Free open interface to achieve full-screen video vertical sliding, image waterfall flow browsing, publish pop-up, message reminders and other social experiences.

**Function Modules:** Home, Album, Publish, Message, Me

**Technical Highlights:**

1. Routing and Navigation: TabView + componentized file structure to achieve top tabs and bottom navigation\
2. Vertical Paging: Encapsulate UIPageViewController vertical paging, index synchronization and switch notification\
3. Architecture and State: MVVM + ObservableObject/@Published, decoupling views and data flow\
4. Network Layer: Encapsulate APIService to unify request management, based on Alamofire + ObjectMapper
5. Adaptation and Immersion: GeometryReader + safeAreaInsets responsive layout
6. Video Playback: AVPlayer auto-play when viewport enters/pause when leaving, buffer indication and loop playback
7. Build and Dependencies: CocoaPods manage dependencies, Fastlane scripted multi-environment packaging and release

**Project Attribution:** Personal Project

**Project Name:** WanAndroid\_SwiftUI (Open Source)

**Project Address:** [https://github.com/PGzxc/WanAndroid\\_SwiftUI](https://github.com/PGzxc/WanAndroid_SwiftUI)

**Software Support:** iOS

**Development Tool:** MacOS(13.4)+Xcode(14.3.1)+Swift(5.8.1)

**Project Description:** This project is an iOS application developed based on WanAndroid website open API.

Adopt SwiftUI to build interfaces, quickly implement UI construction and real-time preview through layouts such as HStack, VStack, ZStack and common components; Use Alamofire in the network layer, combined with AlamofireObjectMapper to achieve data requests and model mapping.

**Function Modules:** Home, Navigation, Project, Message, My

**Technical Highlights:**

1. Use TabView+NavigationStack to build the project's main framework\
2. Encapsulate API interface and routing management, including BaseURL, method, path and parameters to achieve unified management of network requests\
3. Send network requests with Alamofire, combined with AlamofireObjectMapper to Parse response data into Swift models\
4. Based on MVVM architecture design, use ObservableObject to simplify data and view binding
5. Integrate SDWebImageSwiftUI for efficient loading and caching of network images
6. Realize persistent storage of user data through AppStorage
7. Use environmentObject to share and manage global application state
8. Implement SwiftUI homepage carousel based on ImageCarousel
